

**INTRODUCTION**

Armourcote 4481 is a fluoropolymer coating based on polyethersulphone resin which gives good abrasion resistance and release.

Providing good non-stick release qualities whilst maintaining hardness and durability, Armourcote 4481 is widely used in the baking industry.

**FEATURES**

- Good wear resistance
- On the FDA approved list for use in food contact situations

**PROPERTIES**

	<b>Armourcote 4481</b>
Coating Thickness	18 - 25µm per coat
Temperature Range	-80 to 270 °C
Chemical resistance	Should not be used in corrosive environments
Wear resistance	Based on a hard durable resin system and therefore gives good wear resistance which can be increased by using the reinforced version of Armourcote 1480

**APPLICATIONS**

Fusion plates for mould release, grill plates, waffle plates and iron sole plates.
